

Why the UI shows 26 May 2026

Backend handoff · MindWealth Alpha Terminal · 10 June 2026

TL;DR: The frontend *is* connected to the live API. It is not using mock data. Signal/conviction/analytics data is stuck at **2026-05-26** because that is the newest date in conviction_store / trade_store/US/. The daily conviction pipeline has not published overlays after 26 May.

1. Frontend status (not a UI bug)

- UI server calls NUXT_API_BASE_URL → http://51.20.53.218:8506 (API v1.2.0).
- GET /api/meta returns **live** label: *MindWealth API v1.2.0*.
- Mock fallbacks use **12 May** or **17 May** — seeing **26 May** proves live API, not mocks.
- “Last updated” in the topbar is parsed from the overlay CSV filename (e.g. 2026-05-26_outstanding_signal.csv).

2. What the backend returns today

Endpoint / data	Latest date	Source file (example)
GET /conviction/overlays/dates	2026-05-26 (max)	—
Outstanding signals overlay	2026-05-26	trade_store/US/2026-05-26_outstanding_signal.csv
Sigma, breadth, sentiment layers, shortlist	2026-05-26	2026-05-26_*.csv
Macro runic nightly & variables	2026-06-09	Computed (not trade-store overlays)

Overlay dates currently exposed: ["2026-05-15", "2026-05-20", "2026-05-25", "2026-05-26"]
— no June dates exist yet.

2. Data flow (simplified)

Daily pipeline (backend) → trade_store/US/YYYY-MM-DD_*.csv
→ conviction_store overlays

- GET /api/v1/... (MindWealth API)
- Nuxt /api/* routes (MindWealth UI)
- Browser

The UI always requests the **latest** overlay when no report_date is passed. It cannot show 10 June data until the backend creates 2026-06-10_* (or latest trading day) files.

3. Root cause

POST /api/v1/conviction/pipeline/daily (run_daily_conviction_pipeline) appears not to have run successfully — or not on schedule — since **26 May 2026**. Without new overlays, every CSV-backed screen (dashboard KPIs, signals, conviction, performance, breadth, sentiment, shortlist) will keep showing 26 May.

4. Verification commands

Run on EC2 or any machine with API access:

```
# Health + version
curl -s http://51.20.53.218:8506/api/v1/health | jq

# Latest overlay dates (should grow after pipeline runs)
curl -s http://51.20.53.218:8506/api/v1/conviction/overlays/dates | jq

# What "latest" outstanding signal resolves to
curl -s -X POST http://51.20.53.218:8506/api/v1/conviction/signals/overlay-file \
  -H "Content-Type: application/json" \
  -d '{"report_name":"outstanding_signal.csv"}' | jq '.source_file, .row_count'

# Compare: macro is fresher
curl -s http://51.20.53.218:8506/api/v1/macro/runic/nightly | jq '.date'
```

5. Recommended backend actions

1. Check why conviction/pipeline/daily stopped after 2026-05-26 (cron, errors, disk, permissions).
2. Run pipeline for missing trading days (or backfill report_date per day).
3. Confirm /conviction/overlays/dates includes dates after 2026-05-26.
4. Ensure scheduled daily run is active (manifest / logs on success).
5. No frontend deploy needed — UI picks up new files automatically.

6. Optional dry run

```
curl -s -X POST http://51.20.53.218:8506/api/v1/conviction/pipeline/daily \  
  -H "Content-Type: application/json" \  
  -d '{"dry_run":true}' | jq
```
